

BELIZE

Coastal Highway Upgrading

This project will upgrade 59 km of existing unsealed roadway along the East coast of Belize that links the George Price Highway to the Hummingbird Highway, to provide all-weather access, improve connectivity, make the route more climate resilient and improve road safety.

49,000 residents, including
3,000 daily road users,

will benefit from reduced travel time between the Northern and Southern districts, and improved climate resilience, accessibility, and road safety along project route.

2,000 residents

in Gales Point, Hope Creek, La Democracia and Mullins River, including women and youth, will also benefit from improved access to economic opportunities during and after construction.

This project has been made possible through a grant from the United Kingdom Government under the UK Caribbean Infrastructure Fund (UKCIF), which provides grant funding for climate-resilient infrastructure projects to encourage growth and to support improved livelihoods, poverty reduction and safer conditions for residents. UKCIF is administered by the Caribbean Development Bank (CDB).
