This project will upgrade the water supply network and wastewater infrastructure in Dominica to improve its resilience to natural hazards and climate change. It will assist the country in managing the availability, quality, and quantity of water resources available for residential and commercial use.

71,000 residents of Dominica will benefit from a climate resilient water supply and wastewater infrastructure, and increased access to safe drinking water and sanitation.

This project has been made possible through a grant from the United Kingdom Government under the UK Caribbean Infrastructure Fund (UKCIF), which provides grant funding for climate-resilient infrastructure projects to encourage growth and to support improved livelihoods, poverty reduction and safer conditions for residents. UKCIF is administered by the Caribbean Development Bank (CDB).
