

GRENADA

Western Road Corridor Upgrade

This project engaged consulting services to prepare feasibility study and detailed designs for improving climate resilience and safety along 26 km of Grenada’s Western Road Corridor from the capital, St. George’s to the village of Victoria in St. Mark; a Road Safety Assessment; and an Institutional Capacity Assessment and Preliminary Capacity Building Programme to support the Executing Agency. The expected outcome is improved decision-making on the design and resources for a capital project developed based on these outputs.

50,150 residents

of Grenada will benefit from improved access to all weather, climate resilient, safer roads, and reduced travel times along the project corridor.

This project has been made possible through a grant from the United Kingdom Government under the UK Caribbean Infrastructure Fund (UKCIF), which provides grant funding for climate-resilient infrastructure projects to encourage growth and to support improved livelihoods, poverty reduction and safer conditions for residents. UKCIF is administered by the Caribbean Development Bank (CDB).
