

GUYANA

Linden to Mabura Hill Road Upgrade

This project will upgrade 121 kilometres of road from the town of Linden to Mabura Hill, enhancing connectivity between the coastal and interior regions of Guyana. The project will improve transport efficiency, climate resilience and road safety along the project route while mitigating risks to the communities and environment, and promoting social inclusion. The upgraded corridor is expected to facilitate increased trade with neighbouring South American countries.

52,000 annual road users,

including **39,000 residents**

living in Region 10, will benefit from reduced travel times, and improved access to an all-weather, climate-resilient and safe road.

1,400 residents, including indigenous people,

in the communities along the Linden to Mabura Hill corridor will benefit from improved access to essential services, markets, and economic opportunities.

This project has been made possible through a grant from the United Kingdom Government under the UK Caribbean Infrastructure Fund (UKCIF), which provides grant funding for climate-resilient infrastructure projects to encourage growth and to support improved livelihoods, poverty reduction and safer conditions for residents. UKCIF is administered by the Caribbean Development Bank (CDB).
