Southern Plains Agricultural Development

This project will improve agricultural production and productivity in St. Catherine and Clarendon. The project will upgrade the irrigation and drainage, roads and post-harvest handling facilities on 795 hectares of Government-owned lands in Amity Hall and Bridge Pen (St. Catherine) and Parnassus (Clarendon). Farmers will also be offered training in climate smart agriculture and certification in international standards in good agricultural practices. A matching grant scheme will assist small-scale farmers from disadvantaged groups to invest in on-farm irrigation equipment and agri-business ventures.

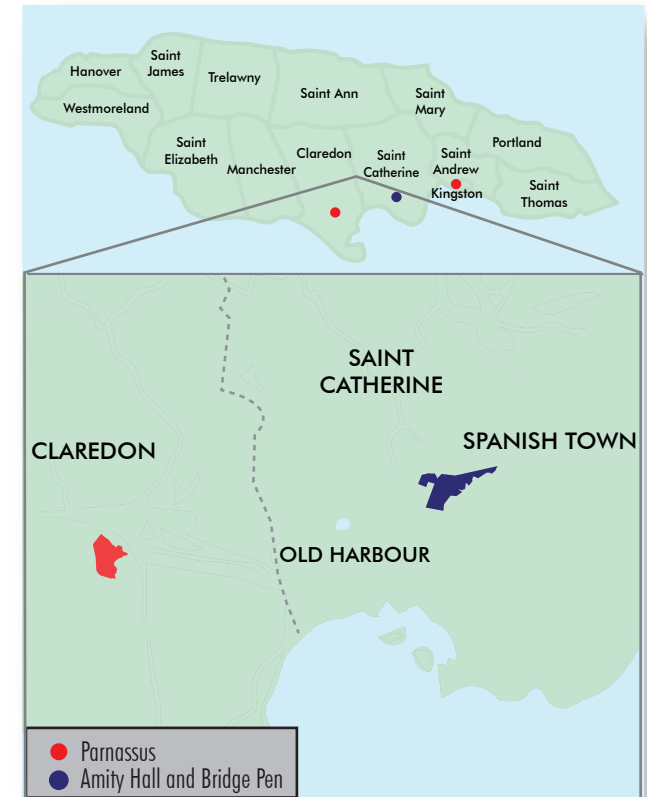

70 small-scale farmers, including women and youth,

will benefit from access to land leases for 495 hectares of irrigated lands, and related training and certification.

10 commercial farmers

will benefit from access to land leases for 300 hectares of irrigated lands and associated infrastructure.

This project has been made possible through a grant from the United Kingdom Government under the UK Caribbean Infrastructure Fund (UKCIF), which provides grant funding for climate-resilient infrastructure projects to encourage growth and to support improved livelihoods, poverty reduction and safer conditions for residents. UKCIF is administered by the Caribbean Development Bank (CDB).
