

# MONTSERRAT

## Port Development Project

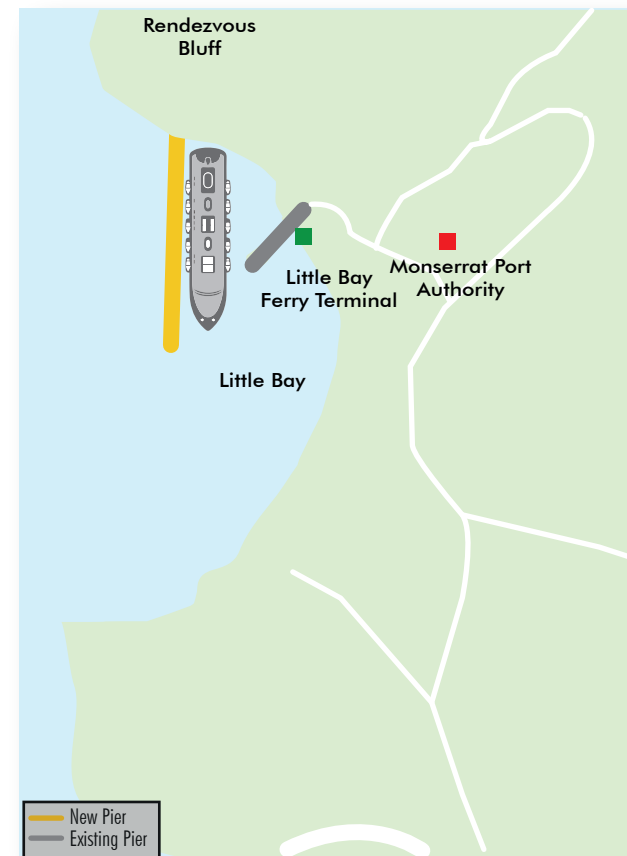

This project will develop new port facilities in Little Bay, providing a safe, climate-resilient harbour, which will improve accessibility to the island. The infrastructure works will include the construction of an offshore jetty, new access road, dredging works, and slope stabilisation. During implementation there will be a strong emphasis on preserving environmental assets, such as the bat colony and the marine habitat.

### 4,000 residents

of Montserrat will benefit from increased efficiency of port services and improved connectivity to the rest of the world, with better access to goods and services. Residents will also benefit from the expansion of the economy.

\* UKCIF grant was increased from £14.5mn (US\$18.8mn) to £28.3mn (US\$36.8mn) by the UK Foreign, Commonwealth and Development Office in January 2022 (pending approval by the CDB Board of Directors)

This project has been made possible through a grant from the United Kingdom Government under the UK Caribbean Infrastructure Fund (UKCIF), which provides grant funding for climate-resilient infrastructure projects to encourage growth and to support improved livelihoods, poverty reduction and safer conditions for residents. UKCIF is administered by the Caribbean Development Bank (CDB).
